DETAILED ACTION

1. In view applicant's argument/amendment, the examiner has decided to use a new reference that explicitly recites a power system with the grid array socket contacting a **surface** of a power converter (see rejection below).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Patel et al (US006366467B1).

Patel's device discloses a power converter (SDC or 602), a land grid array socket or interposer 504, 508, 624) mounted to an array of contacts and pin at 622 on a surface of the power converter corresponding to an array of pads, contact pads made with electrically conductive material are considered as array of contacts on the socket (see claims 2, 5, 9, and 11); the inverter is capable of modifying the voltage of the power supply (inherent features) to a lower voltage and transfer the lower voltage to the socket, a printed board using single direction and compression contact technology for inserting the chip into the board.
